Work Instruction — Performing a Qualification in NEXUS

Document ID: WI-NEXUS-QUAL-001

System: Quality Control Hub — NEXUS Qualification Hub

Standard: Mastercard CQMAP V3.A (CQM Requirements 3a, Nov 2025)

Audience: Quality Managers, Auditors, CQM Primary Contacts

1. Purpose

This work instruction explains how to create and complete a **Qualification** in the NEXUS Qualification Hub. A Qualification is the documented proof that a product design is sound (**Product Qualification**) and that the process producing it is capable and under control (**Process Qualification**), before any CQM product is released to production.

2. Scope

Applies to all CQM product categories (IC, ICM, IL, CB, ICC, P, IAC, BSM and their sub-activities) qualified against CQMAP V3.A. Each Qualification is attached to a NEXUS **audit record** for a vendor site.

3. Roles & responsibilities

Role	Responsibility
Quality Manager	Owns the qualification plan; assigns responsibilities; drives the checklist to completion.
Process / Design Engineer	Provides evidence (SPC, Cpk, specs, calibration, training).
Reviewer	Signs off the intermediate and final design reviews (#0571#).
Auditor	Verifies the qualification gate (#0706#) before production release.

4. The qualification process at a glance

5. Prerequisites

Before starting, confirm:

- You are signed in to the Quality Control Hub with a **Quality Manager**, **Auditor**, or **Admin** role (write access to NEXUS).
- A NEXUS **audit record** exists for the vendor site being qualified.
- The audit's **Product Scope** and **process steps** have been entered (the gate checks these).

6. Step-by-step procedure

Step 1 — Open the NEXUS Hub and select the audit

From the left sidebar, open **NEXUS Hub**. The dashboard lists active audits. Click the audit (vendor site) you are qualifying — here, *Meridian Card Solutions S.A.*

NEXUS Hub dashboard with active audits

Step 2 — Open the Qualification Plans tab

On the audit record, open the **Qualification Plans** tab (also reachable via the *Qual. Plans* quick-navigate button).

Audit record showing the Qualification Plans tab

Step 3 — Review existing plans / start a new one

The **Product Qualification Hub** lists every plan for this audit with its owner and status. Click **New Plan** to create one.

Product Qualification Hub listing plans

Step 4 — Create and seed the plan

In the dialog:

1. Choose the **Plan type** — *Product Qualification* or *Process Qualification*.
2. Enter the **Owner** (responsible Quality Manager).
3. Click **Create & Seed**.

A canonical checklist is auto-seeded from the CQMAP V3.A library, matched to the plan type (Product = 15 items, Process = 13 items).

New Qualification Plan dialog

Step 5 — Work the qualification checklist

Open the plan to see its checklist, the live gate panel, and the design-review section. For each checklist row:

- Enter an **Evidence Ref** (document number, test session ID, CAPA reference, etc.).
- Assign a **Responsible** person.
- Set the **Status** — *Pending* → *In Progress* → *Complete*, or *N/A* if it does not apply.

The header shows live progress (e.g. *0 / 15 checklist items complete*). Each requirement ID (e.g. **#0651#**, **#0582#**, **#0654#**, **#0705#**, **#0811#**) maps to its CQMAP V3.A clause.

Full qualification plan detail — checklist, gate, and design reviews

Step 6 — Record the design reviews (#0571#)

In the **Design Reviews** section, click **Add Intermediate Review** and later **Add Final Review**. For each, record the **Reviewer**, **date**, **outcome** (*pending / approved / conditional / rejected*), and any notes or conditions.

The gate requires the **intermediate** review to be *approved* or *conditional*, and the **final** review to be *approved*.

+ Add Final Review

Design review sign-off row

Step 7 — Check the qualification gate (#0706#)

The gate panel evaluates in real time and shows **NOT PASSED / Production Blocked** until every condition is met. The six conditions are:

- 1. All checklist items complete or N/A
- 2. Intermediate design review approved
- 3. Final design review approved
- 4. No open NC+ / nc- process-step findings
- 5. Vendor site documented for all process steps
- 6. Plan owner assigned

#0706# Qualification Gate — NOT PASSED Production Blocked

✖ All checklist items complete or N/A

15 item(s) still pending

✖ Intermediate design review approved

No intermediate review recorded

✖ Final design review approved

No final review recorded

✔ No open NC+ / nc- process step findings

✖ Vendor site documented for all process steps

No process steps seeded

✔ Plan owner assigned

#0706# qualification gate conditions

Step 8 — Promote the plan status

As work progresses, update the plan **Status** dropdown: *draft* → *in-progress* → *submitted* → *approved* (or *rejected*). Only promote to **approved** once the gate shows all conditions green.

7. Completion criteria

A Qualification is complete when:

- The gate panel shows **all six conditions passed** (no "Production Blocked" banner).
- Both design reviews are recorded, with the final review **approved**.
- The plan status is set to **approved**.

Only then may qualified product be produced using the qualified process (#0706#).
