Work Instruction — Completing the Assessment Workbook in NEXUS

Document ID: WI-NEXUS-WB-002

System: Quality Control Hub — NEXUS Assessment Workbook

Standard: Mastercard CQMAP V3.A (CQM Requirements 3a, Nov 2025)

Audience: Quality Managers, Auditors, CQM Primary Contacts

1. Purpose

This work instruction explains how to start and complete an **Assessment Workbook** — the guided, doc-faithful dry run of the Mastercard CQM audit. The workbook walks you through the same chapters as the official cqmap V3.A document (site profile, audit scope, QMS requirements, per-product requirements), computes readiness using the official workbook's math, and exports your answers into the **official CQMAP `xlsx`** plus an internal **Readiness PDF**.

Use it to answer one question before the real auditor arrives: **"Would we pass today?"**

2. Scope

Applies to every NEXUS audit record. One workbook exists per audit; it reads and writes the same data as the classic QMS Assessment / Product Scope tabs, so work done in either place stays in sync.

3. Roles & responsibilities

Role	Responsibility
CQM Primary Contact	Fills the Site Profile (cqmap Coversheet data).
Quality Manager	Sets the Audit Scope; assesses QMS and process-step requirements; clears blockers.
Process / Design Engineer	Provides evidence references, specs, and equipment details per row.
Auditor (internal dry-run)	Reviews conformity grades, confirms ranks, and signs off the export.

4. The workbook process at a glance

5. Prerequisites

Before starting, confirm:

- You are signed in to the Quality Control Hub with an **Admin**, **Quality Manager**, or **Auditor** role (write access to NEXUS).
- A NEXUS **audit record** exists for the vendor site (NEXUS Hub → All Audits → New Audit if not).

6. Conformity values (used throughout)

Every requirement row is graded with one tap (or one keystroke) using the official cqmAP conformity scale:

Value	Key	Meaning
Full	1	Fully conform
RI	2	Room for Improvement — conform, with observations
nc-	3	Minor non-conformity
NC+	4	Major non-conformity — <i>auto-creates a CAPA</i>
NCC	5	Critical non-conformity — <i>auto-creates a CAPA</i>
n/a	6	Not applicable (excluded from the percentages)
tbd	7	Not assessed yet (counts against you in the percentages)

Grading a row **NC+**, **nc-**, or **NCC** automatically creates a CAPA item in the audit's CAPA register. The row shows a red CAPA badge with the action ID — there is nothing extra to do; track it on the CAPA tab.

7. Step-by-step procedure

Step 1 — Open the workbook

From **NEXUS Hub**, open the audit (vendor site) you are preparing. On the audit record header, click the primary **Open Workbook** button.

The screenshot displays the 'Quality Control Hub' interface. At the top, a blue header bar contains the 'Quality Control Hub' logo and the user 'Admin User'. A red alert banner at the top of the main content area reads: 'Critical compliance issues require immediate attention' with 39 Critical and 7 High issues. Below this, the audit record for 'Meridian Card Solutions S.A.' is shown. The record includes fields for Site Name (Meridian Card Solutions S.A.), Company (Meridian Financial Technologies), Auditor Name (Carlos Herrera), Audit Start (01/20/2026), Audit End (01/22/2026), Status (in-progress), and Audit Grade (Grade C). A 'Next audit' date of 2027-01-22 is also displayed. The 'Open Workbook' button is highlighted in the top right of the audit record header.

Audit record with the Open Workbook button

Step 2 — Chapter 1: Site Profile

The workbook opens on **Site Profile**, which mirrors Section 1 of the cqmAP Coversheet. The left rail lists every chapter with its progress and an overall progress bar — you can jump between chapters at any time, or use the **Next:** button to move forward in document order.

1. Set the **ISO 9001 certificate** switch correctly — it selects which QMS requirement set applies to this site (certified = short set, non-certified = full set).
2. Fill the company, address, contact, identifier, and staff fields. These land 1-for-1 in the Coversheet cells of the exported CQMAP.
3. Click **Save Site Profile**.

Site Profile chapter

Step 3 — Chapter 2: Audit Scope

Tick what this site actually does — this is the doc's "Audit Scope" table. Each product category (IC, ICM, IL, CB, ICC, P, ...) expands to its official variant list.

Quality Control Hub Admin User

OVERALL PROGRESS
34 / 36 assessed - 94%

1. Site Profile
5 / 7

2. Audit Scope
1 / 1

3. QMS Requirements (non-certified)
22 / 22

4. IC - Integrated Circuit — Requirements
6 / 6

5. CB - Cardbody — Requirements
0 / 0

6. Readiness & Export

← Meridian Card Solutions S.A. Audit Scope [Next: QMS Requirements \(non-certified\)](#)

Tick what this site does (the doc's "Audit Scope" table). Ticking a category's first ("Any") row creates its requirements chapter. Rank and percentages are computed in Readiness — never entered here. Unticking hides a chapter but keeps its data.

[Quick start: We make personalized plastic ICCs](#)

IC - Integrated Circuit	▼
ICM - IC Module	▼
IL - Inlay	▼
CB - Cardbody	▼
ICC - IC Card - Card containing an IC	▼
P - Personalized card	▼
iacCM - Module for producing IAC	▼
BSM - Biometric Sensor Module	▼
iacIL - Inlay for producing IAC	▼
IAC - Interactive Card	▼

Audit Scope chapter with the category list

Rules of thumb:

- Ticking a category's first row (the **"Any ..."** row, marked ★) puts the category in scope and **creates its requirements chapter** in the rail, pre-seeded with all of its process steps.
- Tick additional variant rows (e.g. *plICC* - *plastic ICC*) to describe the site precisely — they appear in the export's scope table but do not duplicate the requirements chapter.
- The **In scope** switch controls whether the row counts; the **Audited** switch records whether it was covered during the (dry-run) audit.
- Unticking a category hides its chapter but **keeps all entered data** — re-tick to get it back.
- The **Quick start** chip pre-ticks the typical card-vendor combination in one click.

A category expanded showing its variant rows and switches

Step 4 — Chapter 3: QMS Requirements

Work the QMS requirement list top to bottom. Each row shows its cqmAP tag (e.g. #0231#), the requirement title, and the one-tap conformity chips.

QMS Requirements chapter

Fastest way through the list — keyboard flow:

1. Click any row to focus it (blue outline).
2. ↑ / ↓ moves the focus; keys **1–7** set the conformity (1=Full ... 7=tbd).
3. **Next unassessed** jumps straight to the next row still on *tbd*.

To record supporting detail, expand a row with the chevron:

- **Vendor compliance** — the official self-assessment dropdown (*Yes / Procedure only / Practice only / No / tbd / n/a*).
- **Evidence reference** — document number or QM section that proves it.
- **Notes** — free-text comments; they export into the official sheet.

Requirement ID	Description	Status	Other

Expanded requirement row with detail fields and a CAPA badge

Step 5 — Chapters 4..N: Product category requirements

Each in-scope category gets its own chapter listing its process steps, grouped into the doc's sections (*Process Steps, Qualification & Design, Product Requirements*). Grade them exactly like QMS rows — same chips, same keyboard flow, same expandable detail fields (vendor site, process spec ref, control plan ref, production/test equipment, notes).

Extra markers you may see on a row:

- **Red CAPA badge** — a finding on this row auto-created a CAPA (click-through on the CAPA tab).
- **Flask icon** — physical test data exists for this requirement in Test Sessions (evidence you can point the auditor to).
- **Clipboard icon** (qualification rows) — opens the **Qualification Plan drawer** in place: see the #0706# gate state, tick checklist items, and review design reviews without leaving the workbook.

Product category chapter with grouped process steps

Step 6 — Final chapter: Readiness & Export

This is the payoff screen. It answers **"Would we pass today?"** using the official workbook's math (tbtd counts in the denominator; n/a is excluded):

- **Worst rank suggestion** — the severity ladder applied to your findings: any NCC → D, else NC+ → C, else nc- → B, else A. Rank is *suggested*, never auto-applied.
- **Conformity percentages table** — one row per area (QMS + each category), exactly the columns the auditor's sheet computes.
- **Confirm <rank>** — writes the suggested rank onto the scope row. The #0706# qualification gate is enforced: confirming A/B/C without a passing gate is rejected with the reason.
- **Blockers** — everything stopping a clean audit: NC+/NCC findings, unpassed #0706# gates, unassessed requirements. **Go to chapter** → jumps you straight to the offending chapter.
- **Trend line** — after your second visit, shows the delta since the previous readiness check (*blockers +/-*, *Full +/-*), so you can see the dry-run → fix → re-check loop working.

Readiness chapter with percentages, rank suggestions, and blockers

Step 7 — Export

Two exports, side by side on the Readiness chapter:

- 1. **Export official CQMAP (xlsx)** — fills a pristine copy of the official `cqmAP-3a` template with everything you entered: Coversheet, Audit Scope & Compliance, the correct QMS sheet (certified vs non-certified), and each in-scope category sheet. Rows are matched by their official tags, so the file opens in Excel exactly like the auditor's own copy.
- 2. **Readiness PDF** — the internal one-page summary (verdict, percentage table, blocker list) for management review; it does not go to the auditor.

If the assessment is incomplete, the export warns you first — unassessed rows export as *tbd*:

Qualification gate not passed — No qualification plan exists Go to chapter →

Assessment incomplete
0 area(s) still have unassessed requirements. The exported CQMAP will contain "tbd" cells. Export anyway?
Keep working Export anyway

Incomplete-assessment confirmation before export

Click **Export anyway** to download regardless, or **Keep working** and use the blockers list to finish.

8. Completion criteria

The dry run is complete when, on the Readiness chapter:

- the **Fully assessed** chip is green (no *tbd* anywhere),
- the **Blockers** list is empty ("*None — ready for the auditor*"),
- every category's rank is confirmed,
- and the exported CQMAP xlsx has been reviewed and filed.

9. Troubleshooting

Symptom	Cause / fix
"Save failed — value reverted" toast	The server rejected the value (network or validation). Re-try; check the value against the row's dropdown options.
Confirm rank fails with a #0706# message	The category's qualification gate is not passing. Open the plan drawer (clipboard icon) or the Qualification Plans tab and complete the gate conditions.
Category chapter shows 0 / 0 rows	The scope row exists but no process steps were seeded (e.g. it was created as a variant row). Untick and re-tick the category's ★ "Any ..." row, or add steps via the Product Scope tab.
A chapter disappeared from the rail	Its category was unticked in Audit Scope. Re-tick it — the data is preserved.
Keyboard keys don't grade rows	Click an empty part of a row first (focus must not be inside a text field), then use ↑ and 1–7.

10. Related documents

- **WI-NEXUS-QUAL-001** — Performing a Qualification in NEXUS (qualification plans, design reviews, the #0706# gate).
- [docs/cqmap-3a-2025-11-30-VENDOR-COUNTRY-SITE.xlsx](#) — the official Mastercard CQMAP V3.A workbook this process mirrors.
